Securing the Port, Preserving Its Memory

Port security and digital governance in Douala

Douala, Cameroun

Port Autonome de Douala
Port Authority of Douala

BRONZE SPONSOR

world conference cities & ports by aivp Dunkirk 2026

A Shared Vision

Protecting assets and information

The Port Authority of Douala is advancing two complementary initiatives: strengthening port security and preserving its institutional memory.

Together, they support port modernisation by protecting strategic infrastructure, improving access to information, and strengthening governance.

Port Memory

Documentation and Archives Centre - CDA

The Documentation and Archives Centre safeguards the port's documentary heritage, bringing together records previously dispersed across several sites and exposed to damage or loss.

Progressive digitisation and electronic records management aim to improve information access, strengthen traceability and support audits and decision-making for port staff and the public.

Port Security

Douala Port Security - DPS

Since 2018, Douala Port Security has combined infrastructure, technology, and trained personnel to protect the Port of Douala-Bonaberi and strengthen access control.

Its integrated approach includes perimeter protection, road and rail access gates, land and water patrols, surveillance, lighting, and mobile scanning. The aim: safer operations and greater confidence among port users.
