# The Port-City Relationship in Kribi

Reconciling Operational Performance Requirements with Social Acceptability

*Kribi, Republic of Cameroon*

BRONZE SPONSOR

world conference cities & ports by aivp Dunkirk 2026

## A Commitment to Local Development at the Heart of the Port's Mission

Alongside the expansion of its port and industrial activities and the improvement of its operational performance, the Port Authority of Kribi (PAK) places social acceptability at the heart of its governance.

Convinced that port growth must go hand in hand with the harmonious development of its surrounding territory, the PAK implements social initiatives that directly benefit local communities. Through this commitment, it reinforces its role as a driver of inclusion, solidarity, and sustainable development.

## Urban Sanitation and Environmental Protection

The PAK, a Partner in Building a Clean and Sustainable City

As part of its efforts to strengthen port-city cooperation, the PAK supports local authorities in improving residents' living conditions.

The handover of waste collection tricycles to the Kribi 1st District Municipality helps strengthen urban household waste collection and management, reflecting the PAK's commitment to corporate social responsibility, environmental protection and sustainable development.

## Emergency Response and Support for Education

The PAK Standing Alongside Local Communities

Following a severe storm that damaged the École Publique de Talla in Kribi on the eve of official examinations, the PAK rebuilt and fully equipped a block of classrooms in just 14 days in May 2026.

This emergency intervention at a school hosting an examination centre demonstrates the PAK's commitment to young people, education and territorial solidarity.
